Generally speaking, when most of the people consider e-commerce, they consider the acquisition of products or services by use of the web . However, there's a more specific thanks to ask the sort of online transaction by the means of mentioning which e-commerce category the transfer falls under. There are six basic sorts of e-commerce — Business-to-Business (B2B), Business-to-Consumer (B2C), Consumer-to-Consumer (C2C), Consumer-to-Business (C2B), Business-to-Administration (B2A) and Consumer-to-Administration (C2A) — and every one of them represent a special purchasing dynamic. B2B e-commerce refers to all or any electronic transactions of products and sales that are conducted between two companies. This type of e-commerce typically explains the connection between the producers of a product and therefore the wholesalers who advertise the merchandise for purchase to consumers. Sometimes this enables wholesalers to remain before their competition. Perhaps the foremost common sort of e-commerce, B2C e-commerce deals with electronic business relationships between businesses and consumers. Many people enjoy this avenue of e-commerce because it allows them to buy around for the simplest prices, read customer reviews and sometimes find different products that they wouldn't otherwise be exposed to in the retail world. This e-commerce category also enables businesses to develop a more personalized relationship with their customers. This level of e-commerce encompasses all electronic transactions that happen between consumers. Generally, these transactions are provided by online platforms (such as PayPal), but often are conducted through the utilization of social media networks (Facebook marketplace) and websites (Craigslist). Not the foremost traditional sort of e-commerce, C2B e-commerce is when a consumer makes their services or products available for companies to get . An example of this is able to be a graphic designer customizing a corporation logo or a photographer taking photos for an e-commerce website. This e-commerce category refers to all or any transactions between companies and public administration. This is a neighborhood that involves many services, particularly in areas like Social Security , employment and legal documents. Another popular e-commerce category, C2A e-commerce encompasses all electronic transactions between individuals and public administration. Examples of this include taxes (filing tax returns) and health (scheduling a meeting using a web service. E-business has several components including BI (Business Intelligence), CRM (Customer Relationship Management), ERP (Enterprise Resource Planning), SCM (Supply Chain Management), Collaboration, online activities, and electronic transactions within the firm. But following three areas have great importance for e-business It is also referred to as supplier exchange during which business to business, business

to government, business to consumer, and sales of services are made with the assistance of the web . Basically, e-procurement may be a way adopted by the businesses to scale back the prices and efforts by sourcing products or services electronically.
